T-32 Sleep/Cardiovascular Research Training Program at Morehouse School of Medicine

Overview:

This NHLBI T-32 program expands opportunities for Clinical and Translational Research (CTR) training at Morehouse School of Medicine (MSM) in the area of sleep and cardiovascular disease research.

Upon successful completion of the T-32 training program the trainee will receive a MS degree in Clinical Research.

Goal:

The overall goal of this program is to train underrepresented minority PhD and Medical students to pursue careers in clinical and translational research.

Objective:

To augment the number of skilled investigators pursuing CTR training related to sleep disorders and cardiovascular disease.

Why Choose Morehouse School of Medicine?

A unique strength of this program is how it utilizes the state-of-the-art resources and environment for clinical and translational research training at MSM. These resources include:

- Master of Science in Clinical Research Training Program at the Clinical Research Center
- PhD Program in Biomedical Sciences
- Neuroscience Institute
- Cardiovascular Research Institute
- Medical Education Program
- Atlanta Clinical and Translational Science Institute (ACTSI)

  The ACTSI is a collaborative partnership among Emory University, Morehouse School of Medicine, and Georgia Institute of Technology.

This T-32 program benefits from established ACTSI infrastructure and research faculty in training CTR pre-doctoral students in sleep and cardiovascular disorders research.

Eligibility:

Pre-doctoral students from groups underrepresented in the sciences.

Note: Tuition and stipend support are available for those who qualify!
