Overview

The Grady Hospital Infectious Disease Program (IDP) clinic is a medical specialty outpatient clinic within a community hospital system. The patient population receives treatment for HIV along with mental health and social interventions within the same clinical setting. Residents will be part of a multidisciplinary treatment team and will provide psychiatric consultation and direct patient care for select clinic patients. Residents will be embedded in the IDP clinic. They will also provide consultations on patients for whom they will not serve as the primary clinician, with an emphasis on treatment planning and referral to the most appropriate community mental health and psychosocial resources through collaboration with the clinic social worker.

Child/Family Assessment Clinic

Medical Knowledge

- The resident will demonstrate the knowledge of, and ability to weigh risks and protective factors for parental abuse or neglect and patient danger to self and/or others.
- The resident will have sufficient knowledge to identify common medical conditions
- The resident will identify psychiatric symptoms associated with HIV infection and that may be side effects of treatments for HIV.
- The resident will demonstrate an understanding of psychopathology and the corresponding DSM-5 diagnostic criteria.
- The resident will be able to list situations that mandate reporting or breach of confidentiality.

Patient Care

- The resident will consistently and efficiently obtain complete and accurate history relevant to the patient's complaints or the consulting clinician's question.
- The resident will select laboratory and diagnostic tests appropriate to the clinical presentation.
- The resident will follow clues to identify relevant historical findings in complex clinical situations and unfamiliar circumstances.
- The resident will assess patient safety.
- The resident will develop a basic differential diagnosis for common syndromes and

patient presentations.

- The resident will organize formulations around comprehensive models of phenomenology that take etiology into account.
- The resident will apply an understanding of psychiatric, neurologic, and medical co-morbidities to treatment selection or treatment recommendations.

Interpersonal Skills and Communication

- The resident will develop rapport with patients and families for the purpose of conducting a comprehensive evaluation.
- The resident will verbally communicate preliminary impressions and findings on the day of the evaluation to members of the multidisciplinary treatment team.
- The resident will consistently engage patients and families in shared decision making.
- The resident will effectively provide feedback to multidisciplinary treatment teams.

Practice Based Learning and Improvement

- The resident will regularly seek and incorporate feedback from supervising clinicians to improve performance.
- The resident will incorporate the results of written feedback from multidisciplinary team members to improve performance.
- The resident will assume a role in the consulting psychiatrist to other multidisciplinary treatment team members.

Professionalism

- The resident will demonstrate the capacity for self-reflection, empathy, and curiosity about and openness to different beliefs and points of view, and respect for diversity
- The resident will recognize ethical issues in practice and be able to discuss, analyze, and manage these in the course of completing a comprehensive evaluation.
- The resident will notify the team and enlists back-up when fatigued or ill.
- The resident will recognize the importance of participating in one's professional community.
- The resident will accept the role of the patient's physician and take responsibility (under supervision) for ensuring that the patient /family receives an excellent evaluation.

Systems Based Care

- The resident will describe systems and procedures that promote patient safety
- The resident will demonstrate a knowledge of the relative cost of different patient care options.
- The resident will coordinate patient access to community and system resources.
- The resident will coordinate care with community mental health agencies, including case managers and self-help groups.
